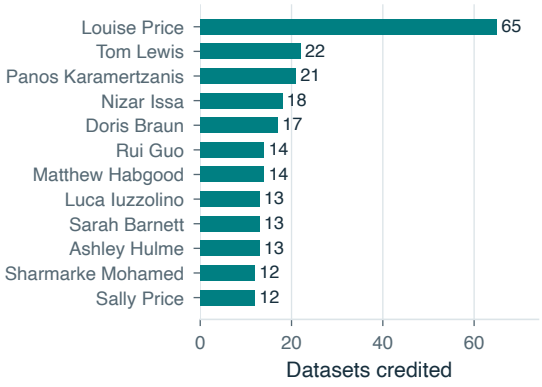
The database in numbers

An audit of the publicly linked CSP landscapes

311	155,824	45	75
CSP datasets	stored structure entries*	named scientists	unique CSP papers

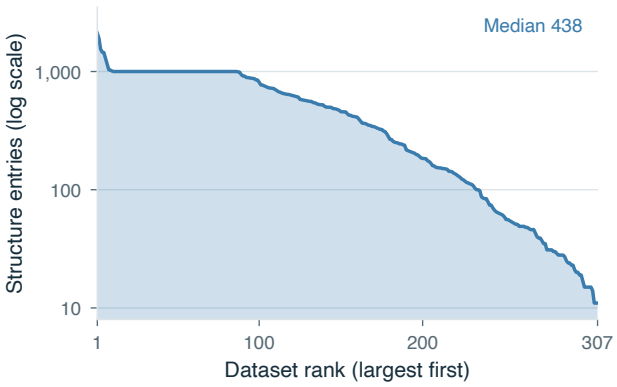
A The scientists

Top 12 of 45; 286/311 datasets have named credits



B Structures per dataset

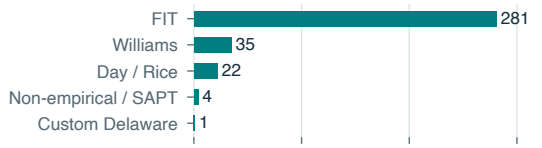
307/311 linked files counted; 4 broken JSON links



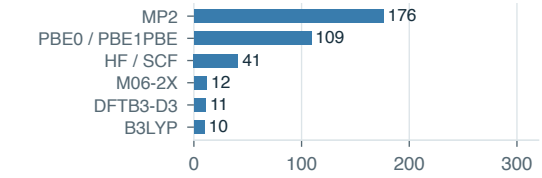
C Energy models

Dataset counts; method categories can overlap

Potential families



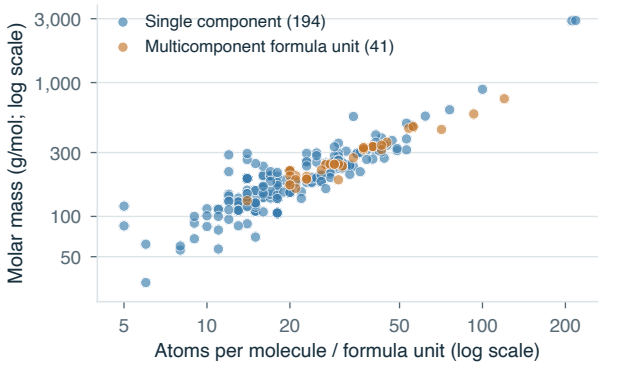
Electronic levels (top 6)



Includes molecular calculations; 31 searches also link pDFT supplements.

D Molecular size

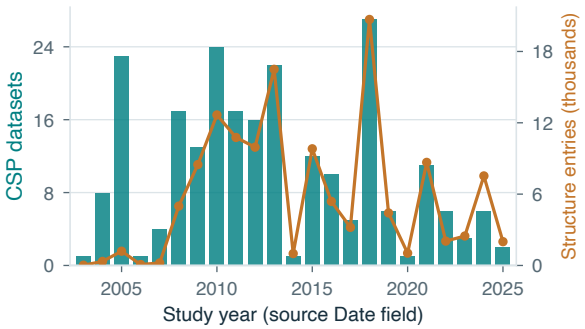
235 documented systems; composition from reported formulas



Hydrogens included; formula-unit masses retain written stoichiometry.

E Landscapes through time

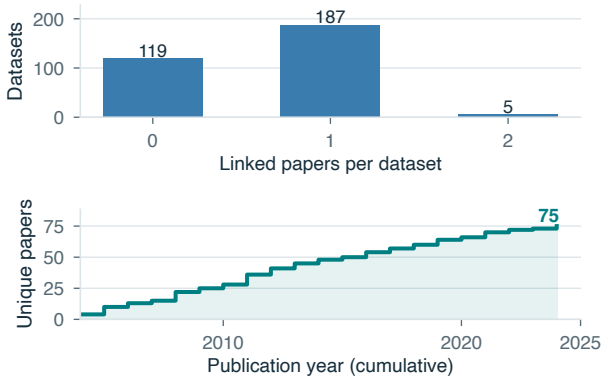
Source study year; 236/311 datasets have a single year



75 searches with ranges / pre-2010 dates excluded from annual bins;
22,343 stored structure entries have no single study year.

F The linked literature

CSP study papers; experimental CSD references kept separate



* Entries in 307 linked Chemiscope files, including experimental references; not globally unique predicted crystals.
